

Rebecca Brown Thompson

Thimbleberry, *Rubus parviflorus*

Because of my interest in wilderness survival and ethnobotany this plant has been of particular interest for me, and a plant I wanted to be sure I knew and recognized, so what better way to do that than to do an intimate sketch and painting of the plant.

The berries are important to not only the bears and birds, but humans as well so a very useful and valuable plant to know. Watercolor, 20 x 23”
